

Automate data privacy & governance

Immuta helps data teams automate privacy and governance when sensitive data is used for business intelligence, analytics and data science – in the cloud or on premise. Simplify data preparation time, eliminate manual anonymization, and mitigate security risks while delivering subscription-level, self-service access to analysts and data scientists. Immuta governs production analytics for the organizations who compete with data yet must preserve privacy – from global banks and healthcare companies, to intelligence agencies, to tech and consumer brands.

Scale fine-grained access controls with ABAC

Prevent data misuse, data leakage and regulatory violations by automatically governing data access with modern, fine-grained, attribute-based access controls (ABAC).

- ✓ Create data policies once and enforce them across new and existing users
- ✓ Scale management across hundreds of users without any role changes
- ✓ Data stays where it should be – no copying data for specific roles
- ✓ Oversee who accesses what data, when, and for what purpose or project

Provide safe, self-service data access to anyone

Empower data science, BI, product, strategy, innovation and other teams to innovate faster with safe, self-service access to any data source – even those with sensitive or private data.

- ✓ Create a subscription catalog of data spanning cloud and on-premise data sources
- ✓ Enable user workflows to subscribe to data, with access granted or denied dynamically
- ✓ Ensure fine-grained access control (column-, row- and cell-level) on read
- ✓ Run subscription reports to see who has access to what data

Advanced privacy protection without copying data

Deploy advanced privacy-enhancing technologies (PETs) to derive new insights from data that would otherwise be unavailable for analytics due to privacy rules and regulations.

- ✓ Apply advanced privacy techniques without code (differential privacy, k-anon, randomization and more)
- ✓ Policy enforcement is transparent to existing analytical tools and notebooks
- ✓ Reduce risk of re-identification by using automated PETs, backed by math with detailed audit reports
- ✓ Simplify data pipelines with policies applied on read, without copying data

Available as a cloud, hybrid cloud, or on-premises solution, Immuta is easy to get up and running. Simply connect Immuta to your cloud data platform or on-premises data, author policies without writing code, provide self-service data access, and audit compliance with built-in reports.

01 CATALOG YOUR DATA

Register, tag and understand your data in seconds - without making copies.

With support for all major cloud data platforms – as well as dozens of on-premises databases and big-data platforms – Immuta provides a central, subscription-level Catalog for BI and analytics data without copying or manually extracting any sensitive information.

02 CONTROL AND GOVERN

Author data security and access control policies - without any coding.

Immuta’s intuitive Policy Builder allows anyone of any technical skill to author complex security and privacy policies. Eliminate the burden of role-based data access by using attribute- and purpose-based policies that govern the data itself and how it is used.

03 SELF-SERVICE ACCESS & PROJECTS

Provide self-service access to data and empower data teams to collaborate – eliminating complex, manual workflows.

Because Immuta continually enforces your data governance policies, users can access the data they need directly, create their own projects, and publish derivative work. Immuta ensures data access and usage is governed continuously with every query from any tool.

04 AUDITING & COMPLIANCE

Prove compliance with regulations & rules with powerful reports & audit logs

Immuta’s powerful auditing and reporting tools give you immediate insight into how data is used across the organization, making it easy to monitor security, prove compliance, and make smarter policy decisions. Build trust with security and legal teams by proving data use is fully compliant with governance and privacy policies.
