

Wrike Analyze

Advanced Reports and Analytics

Move beyond the limitations of basic reports and gain greater insight into work

Teams need deep visibility into project progress and performance to ensure the best results. But not all reports have the power to give you adequate insight, and not all teams have access to separate business

intelligence (BI) tools. Wrike Analyze enables teams to run advanced analytics to get the specific insight they need to perform their best.

Greater visibility

Lack of visibility can hurt your team and push projects over time and over budget. With Wrike Analyze you can better visualize project progress as well as team and project performance by creating advanced analytics dashboards. Get greater insight into bottlenecks and respond more quickly to issues that could derail projects.

Business intelligence

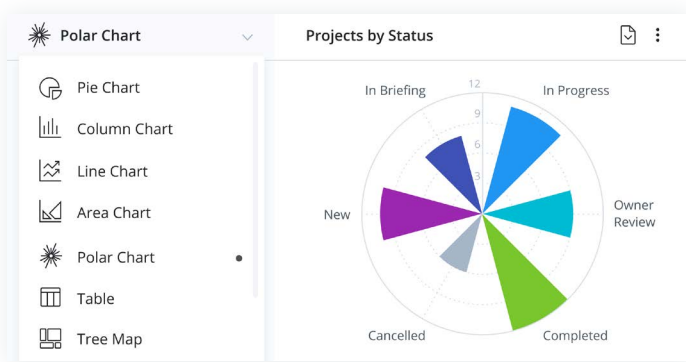

Get the power of advanced reporting and analytics without needing to have access to a separate BI tool. Develop powerful business intelligence right in Wrike, without having to export data and run and manage reports elsewhere. Transform data to get a unique perspective on work and better make strategic business decisions.

The reports you need

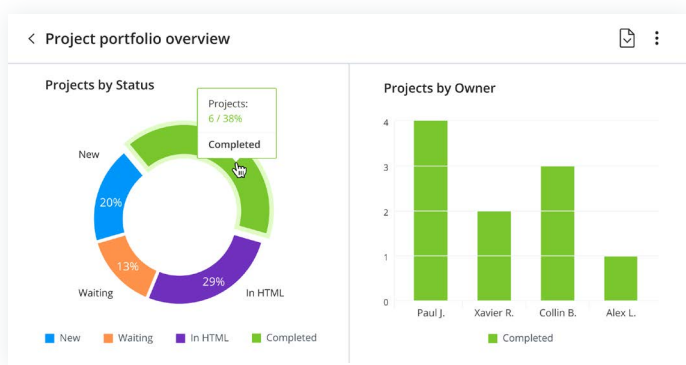

Limitations to what you can do with reports can keep you from the insight your team needs to be successful. Ensure your team gets the insight it needs by building highly customized advanced reports that align with your unique use cases. Choose from a diverse set of graphical ways to best convey results, regardless of audience.

Wrike Analyze: Bringing business intelligence into Wrike

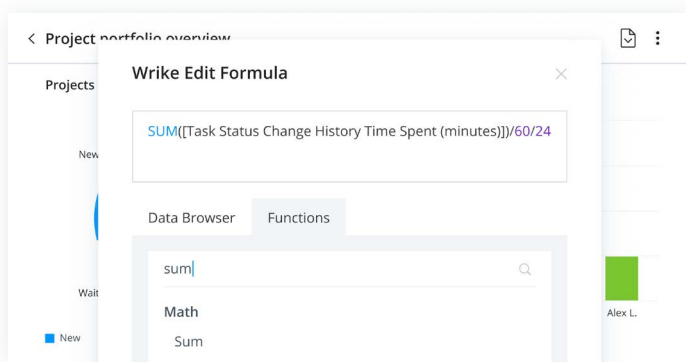

Exceptionally visual

- Choose from more than 15 different ways to visually represent your data to ensure results are shown in the most meaningful and digestible way.
- Use familiar visuals like pie, column, and bar charts or explore more expressive ways to envision information like calendar heatmaps, gauges, polar charts, or funnels.
- Tailor visuals to your audience and configure coloration to dynamically change based on the specific conditions you indicate.

Dedicated analytics dashboards

- Build dedicated dashboards just for advanced reporting – separate from Wrike’s “operational” dashboards – and include as many analytical widgets as you’d like.
- Interact with widgets to dynamically update the entire dashboard or drill down to see the Wrike data they’re reporting on.
- Share analytics dashboards by selecting users or groups and giving them variable levels of access including customized access roles for Enterprise plans.

Customized reporting

- Choose a report template to quickly build an entire analytics dashboard or create exactly what you need from scratch.
- Apply data filters based on project, folder, timelog, and task attributes – including custom fields – and filter individual widgets or entire dashboards.
- Write formulas and use functions for advanced filtering and to transform data by creating calculations as you build dashboards.

Want to get greater visibility into project progress as well as team and project performance? Looking to run advanced reports and analytics on Wrike data? Visit wrike.com/add-on-wrike-analyze/ or speak to your Account Manager to try Wrike Analyze today!
