

Digital.ai App Management

for Government Agencies

Mobile Application Management (MAM)

Digital.ai provides an Enterprise Mobility Management (EMM) solution for remote workforces that distributes and supports employees, contractors and temporary resources all from an agency-branded app store that is compatible in all environments with current MDM solutions. Digital.ai App Management, formerly Apperian, ensures Agencies have a comprehensive system-of-record for deployed apps and reduces the volume of device management issues, ultimately allowing organizations to:

1. Properly on-board apps to ensure they are free of malware and privacy risks
2. Wrap custom and commercial off-the-shelf (COTS) apps with security, analytic, and management policies
3. Vet apps that are made available to users to maximize distribution control and increase adoption

Core competencies

App distribution

- Application deployment on any mobile device (including BYOD)
- Private online app store
- No endpoint agent or MDM required

App governance

- App management and access control
- Active directory integration and SSO
- Integrates with all major COTS MDM solutions

App management

- Push continuous updates
- Maintain version control
- Beta app testing
- App data and feedback

Past performance

- Transport Security Administration (TSA)
- Department of Homeland Security (DHS)
- City and County of San Francisco, CA
