Alset Technologies: Simplifying STIG Compliance

Alset Technologies started from two frustrated cybersecurity professionals who struggled to manage and track results from the enormous amounts of DISA STIG Checks. They lacked a comprehensive understanding of their enterprise systems' security posture, hindering informed decision-making. To fill this gap, a former Air Force Officer and ex-Army Ranger collaborated to create a solution. They successfully aggregated all the data into a single source, enabling data comparisons and answering crucial security questions.

Alset Technologies was founded when they added an integration expert and former paramedic to develop DASH.

Alset has since partnered with Forescout, integrating data and visibility to enable actions like quarantining and remediation based on more granular STIG results. The team's unique skills, enthusiasm, and backgrounds drive Alset Technologies' ongoing developments.

STIG COMPLIANCE

- Configuration standard consisting of cybersecurity requirements for a specific product, produced by the Defense Information Systems Agency (DISA).

- Methodology to enhance overall network security.

- Describes how to minimize network-based attacks and prevent system access.

- Utilized by the DoD to establish a more secured network infrastructure.

DASH

DASH is a STIG compliance tool that automates SCAP benchmark scans and presents results in a user-friendly interface. It simplifies the scanning process by automating security assessments, checking for vulnerabilities and misconfigurations. The scan results are displayed in visual formats, helping users identify compliance gaps and track progress. DASH streamlines the STIG compliance process, providing a clear overview of vulnerabilities and empowering users to strengthen security.

ALSET TECHNOLOGIES

✉ Tyler@AlsetTechnologies.com   📞 334-595-9620   @ AlsetTechnologies.com

- Streamline and accelerate SCAP Benchmark scans through automation.

- Gain clear and intuitive visualizations of STIG Compliance status.

- Get a comprehensive overview of your security posture.

- Analyze trends in security vulnerabilities and improvements over time.

- Access actionable information for targeted remediation efforts.

- Empower data-driven decision making for enhanced security measures.
