structsure

transforming the developer experience

powered by BrainGu

Structsure™ enables resilient, scalable, reliable, and secure automated DevSecOps software delivery for any project regardless of size, industry or regulatory roadblock.
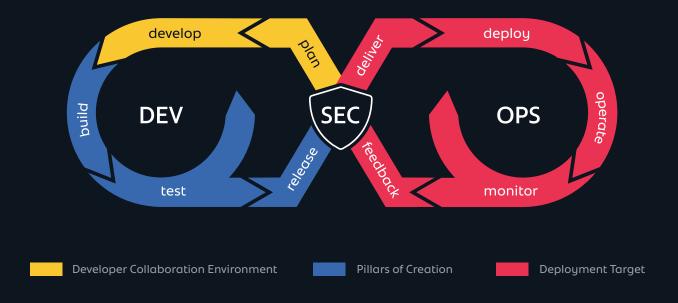

fast and secure

Structsure is an internal developer platform built on top of Kubernetes, Crossplane, and Big Bang that enables software development teams to deliver mission-critical applications more securely, in weeks, not months.

no chaos, just code

BrainGu's DevSecOps Platform Engineers carefully select, integrate, and secure a widely expanding array of technologies from the CNCF Landscape and beyond.

That means you can get right down to developing your applications, instead of spending months or years researching, designing, building, and securing a custom platform from scratch. With Structsure, you can get a serious headstart out of the box, and always extend the capabilities with your own add-ons.

develop · **plan** · **deliver** · **deploy** · **build** · **DEV** · **SEC** · **OPS** · **operate** · **test** · **release** · **feedback** · **monitor**

| | Developer Collaboration Environment | | Pillars of Creation | | Deployment Target |

editions

Structsure automates the most time-consuming and error-prone aspects of the software development lifecycle and is proven to increase application performance and deployment speed.

Platform as a Service

Structsure Cloud is available as a fully managed, all-in-one PaaS where your developers can log in and get to work right away.

On Your Infrastructure

Structsure Enterprise and Edge Deployment Targets enable applications to be launched and managed in your infrastructure by your platform team or with operations support from BrainGu.

Updates and Patching

The Structsure suite of capabilities simplifies ongoing Day 2 Operations like maintenance, system patching, and security updates for your environment, ensuring you're running the latest, safest code.

Developer Experience

Structsure Developer Collaboration Environment provides your team with a simple, efficient way to collaborate on your development workflows across a variety of commonly used tools, keeping devs in the flow state with project data at their fingertips.
