

# Every Network Device, Discovered and Mapped

Automated network discovery, visualization, and change management intelligence – always know what's on your network, how everything is connected, and what's changed over time.

## OVERVIEW

bitB is the revolutionary network visualization and management platform by QoS. In minutes, bitB automatically discovers, maps, and collects data on every component across your network. With accurate, up-to-date Layer 1, Layer 2, and Layer 3 topology maps and historical change intelligence, bitB streamlines network assessments, audits, troubleshooting, and change management – becoming the single source of truth across your entire network infrastructure.

## CORE CAPABILITIES

- **ChangeAssist™ Network Change Intelligence**  
Provides immediate visibility into what changed, where, and when by comparing critical network tables across time intervals to validate changes and rapidly troubleshoot issues.
- **PathView™ Layer 2 and Layer 3 Path Analysis**  
Dynamically maps the Layer 2 and Layer 3 path between two IPs, displaying every device and routing detail in both directions to detect loops and asymmetric routing.
- **Automated Network Discovery & Mapping**  
Automatically discovers network components, collects engineering data, and generates Visio-quality Layer 1, Layer 2, and Layer 3 maps – eliminating manual effort and ensuring decisions are based on the true current network state.

## WHO IS bitB FOR?

**Network and IT Teams** solving complete visibility into the network stack. Track all network changes – device configurations, spanning tree, interface changes, numbers of routes, and more.

**IT and Security Professionals** responsible for network and security assessments, technology certifications and compliance.

**Organizations that want to reduce MTTR**, enhance network reliability and ensure business-critical applications perform smoothly.

## BUSINESS IMPACT

- **Saves thousands of hours per year:** bitB automates discovery, polling and up-to-date documentation – reducing manual workload by 50% or more.
- **Accelerate network assessments:** Reduce data collection time by 30% for security and network assessments.
- **Cut MTTR (Mean Time to Repair):** Rapidly diagnose outages with real-time, actionable insights – minimizing downtime and shortening emergency support calls.

**It's time to know your network.**
