Agentic IT Operations

Strike48 triages incidents, automates troubleshooting, and resolves issues at machine speed. AI agents correlate signals across every infrastructure log—cloud, on-prem, SaaS, and hybrid—so MTTR drops from hours to minutes.

Challenge: Your infrastructure is growing faster than your team.

IT operations teams face relentless environment sprawl—more systems, more services, more logs, more noise. Every new cloud workload, SaaS application, and hybrid deployment adds another data silo and another monitoring tool. Your teams drown in alerts they can't prioritize, troubleshoot incidents across fragmented dashboards, and spend hours on manual root-cause analysis. The gap between infrastructure complexity and operational capacity widens every quarter.

- Alert overload
- Environment sprawl
- Fragmented monitoring
- Slow root-cause analysis
- Escalating tool costs

Solution: Strike48 turns IT noise into autonomous action.

Strike48's AI agents triage incidents, route tickets, and automate initial troubleshooting—across every log source in your environment—without manual intervention. Parse-at-query architecture makes it affordable to retain and analyze 100% of your infrastructure data. Agents don't generate dashboards for engineers to watch—they detect issues, correlate root causes, and drive resolution. Your infrastructure scales. Now your operations do too.

- **Pre-Built IT Ops Agent Packages**
- **No-Code Agent Builder**
- **Log Intelligence Layer**
- **Cross-Stack Signal Correlation**
- **Automated Incident Routing**

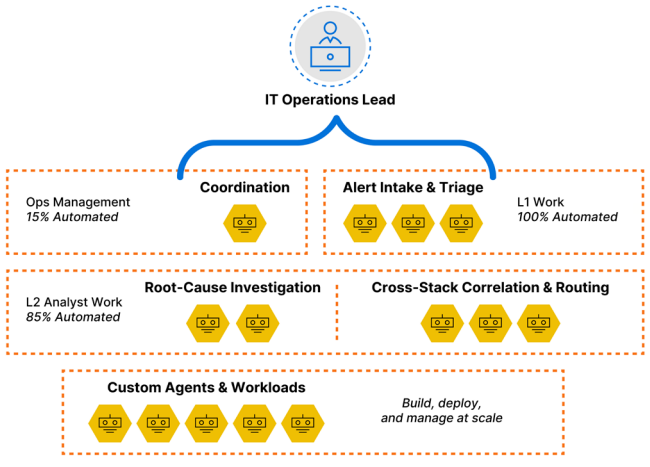
Use Cases Across IT & Infrastructure Operations

Incident Triage & Routing	Root-Cause Analysis	Agentic NOC	Change Impact Analysis
Infrastructure Monitoring	Application Performance	Capacity Planning	Cloud Cost Optimization
Log Store Consolidation	SLA & Uptime Reporting	Workflow Automation	+ Any Log-Focused Use Case

Your IT operations team, multiplied

Strike48 combines pre-built IT operations agent packages that can be deployed and proven in days, with the ability to build custom agents for your organization's unique infrastructure and workflows.

Narrow task scoping and multi-agent handoffs eliminate hallucinations, and every action and outcome is auditable. You set the permissions. You stay in control.



Resolve incidents before they become outages.

Full-stack visibility, autonomous triage, machine-speed resolution.

Strike48: The Agentic Log Intelligence Platform

COMPLETE LOG COVERAGE

See everything, everywhere

Gain full visibility across cloud, on-prem, SaaS, and hybrid infrastructure logs with 100% coverage—no more blind spots or hidden failures. Bring your logs or query them in place, never paying to store the same log twice. Monitor every system cost-effectively, and never miss a critical infrastructure event.

AI AGENTS THAT WORK

Triage, investigate, resolve

Deploy purpose-built IT operations agents that handle real work—triaging incidents, correlating root causes across services, routing tickets, and automating initial troubleshooting—without hallucinations—or build your own. Agents combine cognitive and deterministic steps, work 24/7/365, and always keep a human in the loop.

CONNECTED

Works with your stack

Get insight from your logs where they live. Integrate with your existing monitoring, observability, ITSM, and SIEM tools. Use Bedrock LLMs, MCP connectors, and external DNS. Strike48 unifies query language across sources, so there's no rip-and-replace or learning curve required.

Strike48 Agentic IT Operations Works at Machine Speed

Metric	Today: Human	Strike48: Agentic
Incident triaged	hours	< 8 minutes
Root-cause identified	manual, hours to days	automated, minutes
Systems correlated	one tool at a time	all sources, parallel
Ticket routed	manual handoff	intelligent, automatic
MTTR	hours	minutes
Post-incident report	end of day	real-time

Enterprise-ready

- Deployed in Fortune 500 with 10+ years hardening
- Petabyte-scale storage
- Billions of events/day ingestion
- Cloud, on-prem, or hybrid deployments
- LLM agnostic; swap models any time
- Your data never trains our models
- RBAC, tenant isolation, SOC 2-ready
- Full audit trails on every agent action
- No black boxes—see exactly what agents did and why

Strike48 Closes the Risk Gap Across Your Organization

Eliminate Risk Blind Spots

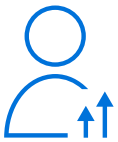
Access 100% of your infrastructure, application, and service logs—ingest or in-place—no forced trade-offs on coverage.

90% Faster Investigations

AI autonomously handles incident triage, cross-stack correlation, and root-cause analysis around the clock.

60-80% Lower Cost

Eliminate redundant log storage, retire expensive legacy monitoring platforms, and consolidate operations into a single agentic layer.



Headcount Efficiency

Expand infrastructure coverage with agentic teams while re-deploying engineers to higher-value architecture and optimization work.
