

Agent-Ready Kubernetes Dashboard

Strike48™

Strike48 KubeStudio is an open-source Kubernetes client that's fast enough to replace your terminal, visual enough to replace your dashboard, and agent-ready out of the box.

The Challenge: Kubernetes tools force you to compromise.

Standard Kubernetes cluster management tools force teams to choose between depth of insight and operational speed while complicating collaboration.

- **Complex interfaces** that lack the visual context required to navigate complex, multi-cluster dependencies
- **Resource-heavy Electron architectures** with browser overhead, leading to slow launches and high memory consumption
- **Isolated environments without shared access**, limiting team visibility and coordination
- **Manual, repetitive workflows** that increase cognitive load and slow down progress

The Solution: A fast, intuitive, agent-ready Kubernetes dashboard.

KubeStudio bridges the gap between terminal speed and visual clarity to provide a high-performance environment. Open source and built for Dev and Ops teams who want a faster Lens replacement they can share across the org and use to hand off to routine work to AI agents.

- **Full visual context** for multi-cluster dependencies with live resource states and rollout progress
- **One Rust/Dioxus codebase** to enable lightweight execution with a quick startup
- **Shared access with configurable permissions** for team-wide cluster management
- **Autonomous agents** that inspect, query, and act on your clusters directly through tool-calling

KubeStudio

Core Capabilities

From manual cluster management to agentic operations.

Cluster Browsing

Easily navigate your Kubernetes infrastructure.

Flexible Deployment Management

Control the full deployment lifecycle.

Pod Inspection

Get deep visibility into running workloads.

Multi-cluster Support

Work across multiple environments.

Flexible Deployment

Run where it fits your workflow.

Use Cases

KubeStudio is designed for:

Cluster Management

Deployment Operations

Debugging

DevOps Workflows

See how KubeStudio compares to Lens and K9s.

Feature	KubeStudio	Lens	K9s
Launch speed	<500ms	~5s	Fast
Visual interface	✓	✓	✗
Keyboard-driven	✓	Limited	✓
Team sharing	✓	✗	✗
Agent integration	✓	✗	✗
CRD auto-discovery	✓	✓	✓
Open source	✓	✗	✓
